INTERNET MULTIFEED Expands JPNAP Osaka Service to NTTDATA Dojima Building

Tokyo, 6th September 2018: Japan's leading Internet Exchange (IX), JPNAP, operated by INTERNET MULTIFEED will extend peering fabric into NTTDATA Dojima building *1 operated by NTT DATA Corporation.

JPNAP Osaka Service is one of the largest IX service in Osaka, a switching platform where CDN/ISP/CATV/IDC can exchange peering traffic with each other.

JPNAP Osaka Service can be connected at the following connection points: NTTDATA Dojima building, NTT Telepark Dojima 1, NTT Telepark Dojima 3, and Keihanshin Nishishinsaibashi Building (OS1).

"All Communication flows through here." We will provide the place and solutions, and will continue to create innovative values.

*1 NTTDATA Dojima building: Carrier neutral data center located in NTT Dojima telepark, the network communication hub in western part of Japan.

It is adopted by various IXs, carries and service providers not only domestic but also international.
